DWG DXF Converter Command Line User Guide

The command line allows you convert dwg to dxf, dxf to dwg and version conversion in silent without interface.
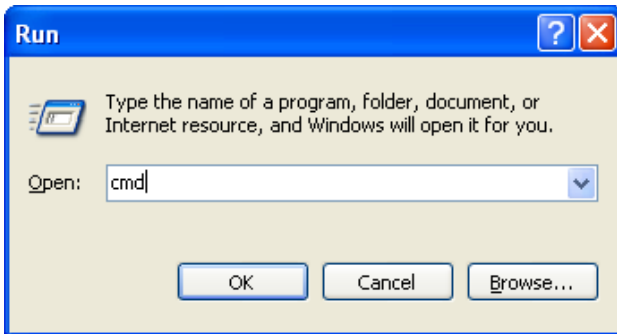

Note: Command Line only supported in Professional and Server Version.

How to use?

▪ From Windows "Start" menu, click on "Run" or hold on "Win" and press "R" on keyboard to launch Windows Run Prompt:

In the blank of the Run Prompt, enter "cmd" command:

▪ Use "cd" (change the current working directory) command of MS-Dos command line to locate to the installation folder of Active DWG DXF converter, for instance, the default installation folder is "C:\Program Files\AutoDWG\Active DWG DXF Converter\":

▪ In command line, enter "dwg2dxf.exe [/F filename] [/O output filename, or folder] [/D Folder] [/S] [/V Output file Version] [/T DWG2DXF: DXF2DWG: Version][/?]" to call the DWG DXF converter in command line.

/F	Input file name, e.g. C:\test.dwg.
/O	Output file name or folder, depend the parameter of /F and /D. if /F then /O specify output file name, otherwise folder.
/D	Input folder.
/S	Include subfolder, only available when /D specified.
/V	Specify output file version, available parameters: R2013/R2010/R2007R2004/R2000/R14/R13/R12/R11/R10/R9/CurrentVersion. The default value is CurrentVersion.
/T	Specify conversion type.
	DWG2DXF - Convert dwg to dxf;
